Description :

PDF-8152e | Since the 1960s, the world's population has more than doubled and agricultural production per person has increased by a third. Yet this growth in production has masked enormous hidden costs arising from widespread pesticide use - massive ecological damage and high incidences of farmer poisoning and chronic health effects. Whereas once the risks involved with pesticide use were judged to be outweighed by the benefits, now the risks are judged to be outweighed by the costs. *The Pesticide Detox: Towards a More Sustainable Agriculture*
